

SHYAM KUMAR YADAV

Full-Stack Software Developer

Chandigarh, India | +91 9569970184 | shyamsky1914@gmail.com | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Full-stack software engineer with 4+ years shipping production systems end-to-end — from database schema design to deployment and team leadership. Built MyRelma, a multi-tenant career-coaching SaaS platform, from zero to production, now serving 20+ tenant organizations at 99%+ uptime. Engineered AI-powered career tooling with LLM orchestration (CrewAI), OpenAI integration, RAG pipelines (Pinecone), and real-time SSE streaming — alongside systems spanning healthcare diagnostics (FHIR/DICOM), inventory/ERP, and fitness booking, using TypeScript, NestJS, Python/FastAPI, PostgreSQL, Angular, and React.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, SQL

Backend & Frameworks: Node.js, NestJS, Express.js, Hapi.js, AdonisJS, REST APIs

Frontend: Angular, React, HTML, CSS, Bootstrap

Databases & ORM: PostgreSQL, MySQL, MongoDB, Redis, TypeORM, Prisma

Queues & Real-Time: BullMQ, Socket.io, Pusher, Server-Sent Events (SSE), WebSockets

Cloud, Auth & DevOps: AWS S3, Cloudflare R2, Azure Blob Storage, JWT, OAuth 2.0, Google OAuth, GitHub Actions CI/CD, PM2, Docker

Generative AI: OpenAI GPT-4o, CrewAI (agentic orchestration), Pinecone (RAG)

Other Integrations: Google APIs (Gmail, Contacts, Calendar, Tasks), LinkedIn API, Twilio, Firebase, FHIR, DICOM

WORK EXPERIENCE AND PROJECTS

Luminoguru Pvt. Ltd. — Mohali

Jan 2022 – Present

Software Engineer

MyRelma — Multi-Tenant Career-Coaching SaaS Platform

NestJS, TypeScript, PostgreSQL, TypeORM, Redis, BullMQ, OpenAI GPT-4o, CrewAI, Pinecone, Pusher, Cloudflare R2, Google APIs, LinkedIn API, Jest | Jun 2025 – Present

- Architected and built the platform from zero to production — 27-module NestJS REST API, PostgreSQL/TypeORM data modeling, and Redis/BullMQ background processing (10 job queues) — now serving **20+ tenant organizations at 99%+ uptime** while leading a 3-person engineering team.
- Engineered a Generative AI career assistant (FastAPI + CrewAI + OpenAI GPT-4o + Pinecone RAG) with **6 production API endpoints** spanning resume upload/parsing (PDF, DOCX, JPEG, PNG), section-by-section rewriting, full resume audit with scoring, SSE-streamed conversational resume chat (LLM classifier routing across 9 message types, 62K+ lines of service logic), and AI email drafting — with structured Pydantic outputs, token-usage tracking, and per-user rate limiting.
- Built an OpenAI-powered email composition assistant streaming context-aware drafts via SSE with thread-aware prompt construction, and integrated Google Workspace (Gmail sync, Contacts, Calendar, Tasks) and LinkedIn OAuth directly into the platform.
- Implemented production-grade security: Redis-backed distributed rate limiting with Postgres failover, per-email auth throttling to prevent OTP brute-force, Helmet HTTP hardening, TLS/CORS enforcement, and graceful shutdown handling.

IMS Link — Inventory Management System (App + API)

Angular, TypeScript, Hapi.js, MySQL, node-cron | May 2022 – June 2025

- Reduced **API response times by 30–40%**, measured by production latency profiling, by optimizing MySQL queries, eliminating N+1 patterns, and refactoring application-level bottlenecks across inventory, serial-tracking, and work-order modules.
- Built modules for item receiving (barcode scanning), warehouse stocking, order picking, serial-number lifecycle tracking, BOM management, and shortage ticketing — Angular frontend (ngx-datatable, Dragula drag-and-drop, bwip-js barcode generation, PapaParse/SheetJS import, Quill, ngx-charts/D3) with Hapi.js/MySQL REST APIs and role-based department permissions.
- Integrated Intuitive ERP and Juki Fortress via bidirectional XML-to-JSON transforms and scheduled cron sync for automated reconciliation; implemented Jaro-Winkler fuzzy search and Nodemailer alerts for shortages and work-order updates.

FlahyRecovery — Oncology Diagnostics Platform

AdonisJS, TypeScript, PostgreSQL, Twilio, Firebase, FHIR, DICOM, Azure Blob Storage | Nov 2024 – Feb 2025

- Engineered a dual-API healthcare backend (main API + DICOM imaging API) for oncology labs — lab management, patient records, sample tracking, and diagnostic report generation — on AdonisJS v6/PostgreSQL/Objection.js with multi-role, policy-based authorization (Bouncer), supporting **200+ patient records**.
- Implemented FHIR-compliant patient/report synchronization, a DICOM imaging service (dcmjs/dicom-parser) with Azure Blob Storage integration and PDF-to-image thumbnailing (pdf2pic + Sharp), Twilio OTP verification, Firebase push alerts, and QR-based sample tracking.

IChooseIAM — Social Community & Event Platform

NestJS, TypeScript, Prisma, MySQL, Socket.io, Firebase (FCM), Handlebars | Mar 2025 – Apr 2025

- Engineered an event-scoped RBAC and delegation system enabling event creators to assign per-event roles (event admins, co-creators) with isolated access boundaries and extended real-time chat moderation capabilities.
- Designed and built an “Incognito Mode” privacy architecture, generating gender-aware private pseudo-identities to anonymize user presence on public feeds, leaderboards, and discovery while preserving mutual-friend profile visibility.
- Built an end-to-end referral and invite-tracking engine (custom referral/member IDs, automated self-referral prevention, dynamic invite generation, per-event conversion analytics), plus real-time event lifecycle notifications via Socket.io and Firebase Cloud Messaging with Handlebars transactional emails and Android/iOS deep-linking.

Gym Pilates — Fitness Class Booking Platform

NestJS, TypeScript, Prisma, PostgreSQL, Socket.io, Firebase, Google OAuth, i18next | Apr 2025 – Oct 2025

- Built a class-booking platform (Admin/Member role-based access, scheduling, subscription administration, cancellation workflows) on NestJS/Prisma/PostgreSQL, with real-time availability via a Socket.io WebSocket gateway and database-level concurrency control to prevent double-bookings.
- Integrated Google OAuth 2.0 social login, Firebase Cloud Messaging push notifications, and bilingual (EN/ES) i18n support via i18next; built admin-facing APIs for user management, class CRUD with cancellation-reason tracking, and subscription-plan lifecycle management.

WalletApp — Multi-Wallet Expense Tracking & Management API

Node.js, Express.js, MySQL, Sequelize ORM, JWT, Bcrypt, Multer, Jimp, Nodemailer | Mar 2022 – May 2022

- Architected a multi-wallet financial tracking REST API supporting cash and debit accounts across 11+ expense categories with multi-currency handling, Sequelize aggregation queries for real-time monthly budget totals, and soft-delete audit trails.
- Implemented JWT authentication with Bcrypt password encryption, express-validator input sanitization, and an automated 6-digit OTP password-reset workflow via Nodemailer.
- Built an administrative management panel (paginated user listings, status toggling, admin-initiated onboarding, login audit tracking with device fingerprinting via node-device-detector) and a secure profile-image pipeline using Multer for uploads and Jimp for resizing/optimization.

EDUCATION

Master of Computer Applications (MCA) — Lovely Professional University (LPU), Punjab | 2021 – 2023

Bachelor of Computer Applications (BCA) — Panjab University (PU), Chandigarh | 2017 – 2020
